

EECS 338 Homework 1: Using Linux and C

General requirements:

- Due at 11 PM on the posted due date.
- Create a typed document (.txt or .pdf) with answers to the questions.
- Upload your document to Canvas.
- *Don't upload the program files this time, because I provided them. You do not need to modify them.*
- All work should be your own, as explained in the Academic Integrity policy from the syllabus.

Instructions: The purpose of this assignment is to become familiar with compiling and running C programs, as well as using a process monitor like “top”. The four programs below are provided for you. Answer the questions that follow. Note that the “top” command may not work on your particular Linux environment. You are encouraged to use eecslnab3.case.edu as described in Tutorial #1. The programs are:

- sleep.c
- input.c
- for.c
- while.c

Questions:

1. Run all four programs simultaneously (use `./program` & or multiple terminal windows). Copy and paste the text from “top” to show what you saw. What do you see for %CPU and status ‘S’? Provide a brief explanation for these results.
2. Run multiple instances (2 or 3) of “for.c” and “while.c”. Copy and paste the text from “top” to show what you saw. What do you see for %CPU? Provide a brief explanation for these results.
3. Close all of your terminal window(s) without terminating the programs. Are they still running when you login again? Provide a possible explanation for what you find. Copy and paste the text from “top” to show what you saw. You may get different results depending on which OS you use for your terminal window (Mac vs. Windows vs. Linux). That’s OK!

Tips:

- When using “top”, the “-u <username>” option filters out processes from other users. However, other users’ programs may affect what you see for your own programs.
- Most terminal windows have a way to highlight and copy the text. Learn how to copy/paste this text without copying the screen as an image. It’s a useful technique.
- Remember to terminate instances of “input.c” and “while.c” when you are done. You may press ‘k’ in “top”, followed by the PID.
- Sort by PID if you don’t like the order to change (SHIFT-F for configuration screen, use up/down cursor to highlight PID, press ‘s’ to select PID as sort field, and press ‘q’ or ESC to go back).

Grading Rubric:

Item	Points
1. Results included for all four programs	40
1. Written description/explanation of results	10
2. Results included	10
2. Written description/explanation of results	10
3. Answer: running or not running	10
3. Explanation	10
3. Results from "top"	10

<i>Total</i>	100
--------------	-----

Note: Reasonable responses will receive full credit.
